

Visnevschi Vladislav

Unity / AR Mixed-Reality Developer (C#)

visnevskivlad@gmail.com | (+41)762219794 | <https://orthrusgames.github.io/>

Zurich, Switzerland

Unity Developer with **4+ years** of experience building **games and AR applications** across mobile, PC, console, and **XR**. Strong focus on gameplay systems, state-driven logic, and cross-platform development. Proven experience shipping production **Unity** projects and rapid **AR prototypes** with **real-world context integration**.

Skills

Tech skills : **Tech skills: Unity (C#), AR Foundation, XR Interaction Toolkit, Mobile AR Gameplay Systems, State Machines, AI Behaviors, Performance Profiling, Git**

Languages: English(C1), Romanian(C2), Russian(C2), German(B1), Italian(B1)

Experience

Unity XR Developer at ColorfulCoding Mar 2023-Oct 2025

- Designed **modular gameplay** systems using Unity and **state-machine-driven architecture**, enabling **scalable expansion** of weapons, inventory, NPC behavior and buff mechanics without refactoring core logic.
- Implemented **organic NPC AI** using **multi-state behavior trees** and **dynamic pathfinding**, resulting in believable agent interactions and adaptive escape behavior.
- Delivered **Unity gameplay prototypes** within **1–2 week** cycles using clean, modular code, enabling non-technical stakeholders to reliably demo features to clients.

Unity XR Developer at Midnight Works Oct 2021 - Mar 2023

- Improved gameplay, UI, and runtime performance using Unity profiling tools and console build pipelines, resulting in stable performance across multiple **PlayStation projects**.
- Designed a **real-time traffic simulation** system using **AI-controlled agents** and road-network navigation, enabling dynamic vehicle behavior in an open-world environment.
- Built **reusable Unity tooling** for input handling, trophies, and save systems, reducing feature implementation time **from ~4–5 days to ~1 day**.

Projects

FamilyHub Oct 2025-PRESENT

- Developed a RESTful backend using Spring Boot, MVC, and repository patterns, enabling scalable handling of real-time calendar and household data.
- Secured multi-user access using Spring Security with encrypted credentials and RBAC, ensuring safe access to sensitive family data.

Travel Assistant Dec 2024-Oct 2025

- Built a **location-based AR** experience using **Unity, GPS, and street-level positioning**, enabling contextual visual overlays triggered **by real-world locations**.
- Implemented an **interactive geospatial map** using real-time coordinates, POI data, and dynamic routing logic, enabling smooth navigation and discovery.
- Developed **AI-enhanced NPCs** using **dialogue systems** and **contextual behaviors** powered by **ChatGPT** and **ElevenLabs APIs**.
- Reduced AI NPC response **time by ~80%** using **asynchronous API** calls and **multithreaded** task handling.

OrthrusGames

Oct 2021-PRESENT

- Built and released **4 production games** using **C#** and **Unity** within a self-directed development pipeline, resulting in stable public releases.
- Designed scalable, modular architectures supporting **reusable logic** and **rapid prototyping**.
- **Managed source control, builds, testing, and deployment** independently, ensuring consistent delivery cycles.

C++ Puzzle Game

Oct 2020 - Dec 2020

- Implemented a rule-based puzzle game in modern C++ using deterministic state management, ensuring correct move validation and consistent win-condition evaluation.

Education

BSc Computer Science (EN), Alexandru Ioan Cuza University

2019–2022
