Tech Stats

Unity, C#, AR, VR,
XR, ARCore, OpenXR
ARFoundation, XRToolkit,
UIToolkit, Git
team-management

Profile

- **XR Experience:** Built high-performance VR/AR simulations in Unity with strong focus on interaction and responsiveness. Familiar with OpenXR and Unity's XR plugin architecture for cross-device deployment and real-time debugging.
- **C# and Unity Expertise:** Over 4 years of experience with **Unity** and **C#**, working across game mechanics, AI behaviors, UI Toolkit, Shaders, VFX, SFX, animation systems, NavMesh, and both 2D/3D physics. This helps me understand how features should work—and how they fail.
- **Self-Sufficient and Collaborative:** I have worked on both team-based and solo AR/VR/3D/2D projects—often under tight deadlines. Collaborating closely with lead developers taught me to work independently, test rigorously, and communicate clearly within small or big teams.
- **Led cross-functional projects from concept to delivery**, coordinating with teams to ensure timely, high-quality results using Agile methodologies. Managed teams of 2-5 people across different sized projects. Some of them can be seen in my portfolio.
- **End-to-End Project Execution & Data Handling:** Led the development of multiple projects. Successfully designed and developed the project structure and processes.

Professional Experience

Software Developer at ColorfulCoding

[\(https://colorfulcoding.com/\)](https://colorfulcoding.com/)

March 2023 - January 2025

România

Work Environment

Part of a high-performing Unity AR/VR team where I handled core development, tool integration, and performance-sensitive systems. I had full access to the architecture, which helped me develop strong debugging skills and a scalable mindset. Focused on building immersive, real-time XR experiences with tight delivery timelines.

Responsibilities and accomplishments

- Developed multiple **VR/AR simulations** (surgery, golf, and a 3D shooter) — focused on real-time interactivity, usability, and low-latency performance (*see portfolio*)
- Created a complex State Machine and Behavior Tree system for enemy AI in a 3D shooter
- Designed and implemented a voice-interactive AI NPC system with **speech-to-text/text-to-speech**, improving response speed by **60%**
- **Profiled and optimized** Unity applications using Unity Profiler and in-editor tools to maintain smooth frame rates on standalone VR headsets
- Collaborated on internal tool integration and workflow automation (TTS APIs, UI systems, character animation triggers)

Tech stack: **Unity, C#**, Blender, ARFoundation, XRToolkit, ChatGPT API, Eleven Labs, Convai.ai, Imworld, UIToolkit, 3D modeling, Git

Work Environment

Leading the development of an AR-powered tourism app for Zurich, combining immersive storytelling with interactive technology

- Created **AR** Experiences over Zurich Murals
- Implemented an interactive map displaying all AR locations and live content
- Managed all project data pipelines, from content input to real-time rendering
- Designed and built scalable **architecture** for the entire **C#** project

Tech stack: Unity, C#, Blender, git, Photoshop, Premiere-Pro, team-management

Software Developer, OrthrusGames**October 2022 – PRESENT**Work Environment

Independently built and released 4 original games (3 mobile, 1 PC) as part of a small teams (2–5 members). Took on **leadership, project management, and technical development** responsibilities throughout the lifecycle of each project. (All projects can be seen in the portfolio)

- Led game development and project planning from concept to release
- Designed and implemented core gameplay systems and architecture in **Unity C#**
- Managed small cross-functional teams, assigning tasks, setting milestones, and ensuring delivery
- Oversaw testing, debugging, and final polish for stable releases
- Maintained team motivation and consistent progress while balancing side-project status

Tech stack: Unity, C#, Blender, git, Photoshop, team-management

Software Developer Intern, Midnight Works**October 2022 – March 2023**[\(https://midnight.works/\)](https://midnight.works/)**Moldova**Work Environment

Worked in a team of 10 junior developers and 3 mid-senior developers. The mid-senior developers were there in case anyone was stuck, mostly focused on their projects, and we had one team manager who was monitoring the progress

Responsibilities and accomplishments

- Migrated Games from PC/Mobile/Nintendo to PS4 and PS5
- Implemented a traffic system for a driving game in **C#**
- Implemented the trophy system for the PlayStation Console
- Implemented new game mechanics to deliver a better product
- Optimized projects for a 30-60% better frame rate
- Developed **Unity** Windows to automate some of the migration processes
- Developed a **C#** code base to ease and fasten the migrating process
- Set up a friendly atmosphere within the team
- Quickly overtook the mid-senior developer's responsibility to train newcomers

Tech stack: Unity, C#, Blender, PlayStation, git

Education

Bachelor's Degree in **Computer Science** at "Alexandru Ioan Cuza" University, Iasi, Romania 2019-2022

Projects:

- Developed a **puzzle board game in C++**
- Developed a **chess game using Python**
- Created a **Java-based Online Checkers game**
- Developed a simple Website with **HTML, CSS, JS, SQL and php**
- Created an **online chat App in Java**
